Paula Sageser
Writing Samples

Samples of published magazine ads, as well as a sample of a technical diagram created in Visio.

Computer-based
Communications for the Deaf

NXi Communications, Inc. specializes in text based communications for the deaf as well as text messaging products.

As shown in the figure above, one or more modem servers are placed on the network. These modems can then be shared with everyone on the network. NTS also supports an Internet Gateway for text calls and messaging over the Internet.
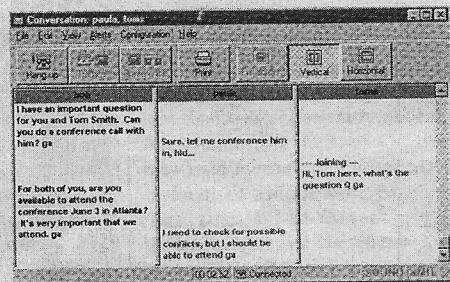

Products for Organizations

NTS (NXi Text Services) is for any organization that communicates with deaf or speech impaired clients, customers or patients.

NTS is also designed for any organization that could benefit from enhanced messaging for all network users.

Install NTS client software on any number of networked computers. Any computer on the LAN or WAN may then be used to:

♦ **talk directly with the deaf**
♦ **accept messages from the deaf**
♦ **send "pop up" messages to departments or users**
♦ **transfer any text call through the network**

Products for Individuals

NXi has computer software and modems which allow individuals to call or accept calls from the text telephones used by the deaf. A new NXi product, called NexTalk-VM, allows certain low-cost, standard 56k modems to communicate directly with the text telephones used by the deaf. Contact NXi for more information.

A text conference call in NTS between 3 users.
